ACKNOWLEDGEMENT

At the outset, we extend our heartfelt gratitude to every stakeholder who lent out their kind cooperation to bring this profile into a completion. We also place our deepest gratitude to Center for Research and Information (CRI) for giving us the opportunity to get tied up with this project. We are also indebted to Honorable State Minister of ICT Division, Mr. Zunaid Ahmed Palak and Banamali Bhowmick, Honorable Director General, Department of ICT for their valuable insights and continuous guidance that showed us the way to keep this work forward especially in writing this profile. Furthermore, we would like to offer special thanks to our team members.

OVERVIEW IN BRIEF

In sync with vision 2021, a pledge of Honorable Prime Minister Sheikh Hasina to transform the future of Bangladesh into a technologically advanced one, this project of setting up Sheikh Russell Digital Labs (Computer and Language Training Labs) in educational institutions, has been conceptualized and came into being. Under intense supervision of ICT Division and Department of ICT, as many as, 2001 computer labs and 65 language labs have been set up. HPM Sheikh Hasina inaugurated this project through a video conference in 23 educational institutions. Target has been set to transform such labs as local cyber hubs, opening up an opportunity for students to acquire basic ICT skills that can push them a step forward in becoming self-reliant.

OBJECTIVE

The project seeks to light up the young minds with essential ICT skills in remote parts of the country, to make ICT education accessible even than before, build a large ICT skilled work-force and equip them with adequate skills so that they can excel in global market.

INCEPTION

On 2nd October last year, a Memorandum of Understanding was signed between Department of Information & Communication Technology (DoICT), ICT Division and Young Bangla, the largest national youth platform, under the auspices of centre for Research and Information (CRI). Key clauses are mentioned herewith: "Under this project, DoICT has established 2,001 "Sheikh Russell Digital Labs" in the said number of educational institutions countrywide. Young Bangla-CRI will provide maintenance and training support, and two(2) coordinators and ten(10) volunteers for each lab. The responsibility of those coordinators and volunteers will be to assist the institute arranging training programs regularly after the school hours in holidays."

PROGRAMME STRATEGY

Key priority has been laid out to open up a new horizon in ensuring maximum use of all the limited resources available to us. To date, DoICT has provided 17 laptops, 1 laser printer, 1 scanner, 1 projector with screen, one pocket router with 20GB monthly data plan of 2MBPS speed alongside all the required furniture and decoration support. Training sessions for master trainers were provided in 64 language labs across the country in 9 languages which are: English, French, Spanish, German, Russian, Chinese, Japanese, Korean & Arabic. Distributed laptops are equipped with windows operating system version 10 and Microsoft office 2016 built-in. If we eye for offering training on graphics designing, which is the mostly used in global ICT market we would need all three adobe products(Photoshop, illustrator and premier pro) installed in all the laptops. If we target offer training on basic programming, it would also require some other tools and basic knowledge training sessions.

Given that, participants hold a little knowledge on operation of basic computer skills, focus was streamlined to create a network through SRDL that can ensure flow of information all along through it. So plans are split into two stages. Phase A: a network meeting among all the stakeholders related in this regard Phase B. devised to provide basic computer training alongside with Microsoft office (word, PowerPoint and excel) training. We also provided them with detailed tutorials on these topics alongside freelancing for beginners. In the face of shortcomings within the project and its budget part, training session has been squeezed into 1-2 days. Our targets were set to provide trainings over easy applications, creating trainers for the other volunteers, developing their basic skills, showing them the right way of thinking, interacting with them to explore their needs, make them a part of digital Bangladesh.

REACHING OUT TO PUBLIC

All the programs were broadcast live on Facebook as DCs, ADCs, UNOs, ACs, Programmers, Assistant Programmers, Institution Head, ICT teachers and young Bangla team was present in the networking meeting. All the albums containing pictures were uploaded on our official facebook page and website with videos. A database was created in compilation of attendance records. All the filed observations, challenges, future opportunity and possibilities were reported to the central coordination team of Sheikh Russell Digital Lab (SRDL)

ESTABLISHMENT BACKGROUND

For fulfilling the vision 2021 - Digital Bangladesh and the mission to make Bangladesh the next IT destination, under this project of setting up Sheikh Russell Digital Lab (Computer and Language Training Lab) in educational institutions across the country, ICT Division and Department of ICT has already set up 2001 computer labs and 65 language labs in different educational institutions in the first phase. Honorable Prime Minister Sheikh Hasina inaugurated this project through video conference in twenty three educational institutions. The main aspect was to develop ICT skills of the students as well as use those labs as local cyber hubs and create self-employment opportunities for the youth to develop their entrepreneurial skills and build careers.

PROJECT OBJECTIVES

Develop ICT skills of the students

Create self-employment opportunities for the local youth

Build up ICT service providing local cyber hubs

Reach our global sustainable development goals

SUSTAINABLE DEVELOPMENT GOALS

RESOURCES

2001 Sheikh Russell Digital Labs

Equipment in each lab

Hardwares

- ❑ Laptops-17
- ❑ Headphones- 17
(only in language labs)
- ❑ Printer-1
- ❑ Scanner-1
- ❑ Projector-1
- ❑ Pocket Router-1

Softwares

- ❑ Windows 10 operating system
- ❑ Microsoft Office 2016
- ❑ In all of them

2nd October, 2016

Memorandum of Understanding(MoU)

Was signed between

Department of Information &
Communication Technology
(DoICT), ICT Division

Young Bangla,
Center for Research &
Information(CRI)

SUMMARY

Under the lab project DoICT has established 2,001 “Sheikh Russell Digital Labs” in 2,001 educational institutions across Bangladesh.

Young Bangla-CRI will provide maintenance and training support for the above mentioned computer and language labs.

Young Bangla-CRI will provide two(2) coordinators and ten(10) volunteers for each lab.

The responsibility of these coordinators and volunteers will be to support the institute and arrange training programs regularly after the school hours and in holidays.

SHEIKH RUSSELL DIGITAL LAB

ORIENTATIONAL VISIT AND THE TRAINING PROGRAM

TRAINING OUTLINE

Session with the coordinators and the committees

● Implying their further duty

● Arranging training programs

● Benefits of the training

● Developing their skills

● Exploring theirs needs

● Requirements and opinions

● Discussing future perspectives

● Surveying

MAIN FOCUS

Providing trainings applying easier methods

Creating trainers for the other volunteers

Developing their basic skills

Showing them the right way of thinking

Interacting with them to explore their needs

Make them a part of Digital Bangladesh

PROGRAMME SUMMARY

**Three (3) days
program per district**

Day-1 Preparations and meetings

Day-2 Orientation and Basic
Computer Training

Day-3 Microsoft Office Training, Certification
Ceremony and session with the
coordinators and the committee

TRAINING OUTLINE

Orientation

Young Bangla Introduction - AV

ICT Development Programs - AV/Brief

Digital Lab Introduction - A/V

Digital Lab use - Brief

Q&A session

TRAINING OUTLINE

Basic Computer Training

Introduction to computer

Software, Windows, Anti-virus installation and use

Email account and use

File, folder, Create, compress, search, view and right click

Printer, Scanner and projector installation and use

Basic Internet Browsing

Pen drive, Hard disk, Dvd

Control Panel and task bar shortcuts

Email account creating and use

Cut, Copy, Paste, Undo Find shortcuts

Internet setup and Wi-Fi

Social Media(facebook)

TRAINING OUTLINE

Microsoft Office Session-1

Discussion about the common menu bar for all products

Font formatting(Size, color, effect, install, spacing, bullets, alignments)

Margin, header, footer, page break

Word file creation and save

Inserting shapes and pictures and their formatting

Equation

Page setup and orientation design

Inserting table and formatting

Save as and printing

UPDATE

- ☐ Each program aired live on Facebook
- ☐ DCs, ADCs, UNOs, ACs, Programmers, Assistant Programmers, Institution Heads ,ICT teachers and members of Young Bangla were present in the networking meeting
- ☐ One ICT teacher and one or two young bangla volunteer received training.
- ☐ Our initiative was clearly briefed in the networking program
- ☐ Training, following the next day held on Microsoft office basics
- ☐ Expected to be completed in all the districts by this month (May,2017)

ASSIGNMENT FOR THE LAB COORDINATORS(12 WEEKS)

BACKGROUND

As we provided coordinators in each lab and prepared them with basic trainings, it was important to ensure that they fulfill the duties properly. It was also important to think about the training students must get. So combined our problems to reach a common solution and prepared a three month assignment for our coordinators, each coordinator must submit this assignment regularly and through this it'd be possible to get a community of more than two lakh trained and skillful youth

1st Week | Learn and Get ready: By using our training and providing our video tutorials we oversaw coordinators practise those properly.

2nd-3rd Week | Make your Volunteers ready: By using our training and the video tutorials we provided, coordinators have to train their volunteers (10 per school).

4th Week | Network Meeting: Network Meeting: With all the students, coordinators will arrange a network meeting to discuss the current state of technology and get them familiar with some updated technology of Bangladesh to motivate them in this sector, furthermore they'll discuss how we can use these labs as a medium of development of our country.

5th-12th Week | Students Training: With suggestions from teachers, coordinators will select 10 students per lab who relatively needs more financial backup and traing them by the following routine given below. These students will get certificates after completion of their training.

Title	Microsoft Office			Microsoft Digital Literacy				
week/ day	1st	2nd	3rd	4th	5th	6th	7th	8th
Thursday	Word	Powerpoint	Excel	Chapter-1	Chapter-3	Chapter-5	Chapter-7	Chapter-9
Friday	Word	Powerpoint	Excel	Chapter-2	Chapter-4	Chapter-6	Chapter-8	Chapter-10

ACHIEVEMENTS

Topic	Completed	Expected
Orientational visit	57 districts	64 districts
Active Labs	1728	2001
Officials involved in network meeting	1000+	1500+
Trained Coordinator	3000+	4000+
Microsoft Digital Literacy	7000 students in 280 schools	50000+ students in 2001 labs
Video screening on liberation war	4000+ in 100 labs	80000+ in 2001 labs

“Mukti Songramer Itihas”

Video Screening

Summary

“Mukti Songramer Itihas” a documentary based on our liberation war 1971 was screened in 100 Labs.

30-50 Students per lab and teachers were present as viewers

The idea was to let the students know about our great history of struggle and inspire them to work for the country.

Young Bangla lab coordinators arranged this program with direction from SRDL team.

Sheikh Russell Digital Lab Activation Data

FIRST-HAND OBSERVATIONS & CHALLENGES

On the front of execution on ground, connectivity appears as a key issue with labs mostly located in grass-roots. Still, we managed to get the fruition of our efforts to the remotest parts, thanks to this SRDL project. As the select groups of teachers are mostly from business studies and humanities background, it was important to make them learn even the basics of computer. Ironically, these teachers had been providing training to our students on the quality ICT curriculum from class 6 to 12. In some places, the Headmasters or Principals of schools and colleges are not willing to use the lab on a daily basis due to unknown reasons. Even, in some places most of the laptops were found in the house of ICT teachers and institutional heads. In 65% places all the 17 laptops were not found in the lab. The lab rooms are not secured enough and a lacking in security(guards/CCTV cameras) was evidenced. The lab authorities in school are not willing to graduate the lab into local cyber centers as most of them don't want entrance of any outsider. From our sources we found that in most of the labs ICT teachers have been engaged in public tutoring to make money and are completely reluctant to make the labs operational. People are deprived of their due rights as access to printer, scanner, etc. were only available for teachers. Labs provided by other sources (except: SRDL) completely remained ineffective in most of the places. So it is very hard to connect the whole country in one network through 2001 points. So lack of operational establishments is a big challenge in realizing our goals.

FUTURE OPPORTUNITIES & POSSIBILITIES

If utilized properly, these labs can be turned into the best medium to connect and orient the grass roots with most of the developmental initiatives by our government. For a certain community, consisting of Young Bangla volunteers, teachers and students, possibilities are endless to spread the light of ICT and build a skilled manpower through taking the trainings forward. According to the objectives if these labs can be turned into as local cyber hubs or service centers this connectivity can help us reaching our vision 2021- Digital Bangladesh. This network can connect all the sectors like: education, e-commerce, agriculture, health, etc.. up to the grass root to develop dramatically. Our sustainable development goals(SDG's) such as: quality education, no poverty, good health, gender equality, reduced inequality, economic growth, sustainable communities, etc. is possible to achieve through this network. Still, more people in grass roots have to be reached as there are more than 1lakh educational institutions in our country and we've only reached 2001 of them. Our target of earning 5 billion USD from country's IT and ITES exports is a big challenge that our government has set. According to our assumptions maximum 4 billion can be earned from freelancing and outsourcing if we establish this network in minimum one fourth of our educational institutions and provide suitable beginner to advance training to our targeted community and serve the local people from these labs in regular basis.

RECOMMENDATIONS & REQUIREMENTS

— Internet availability

— Instructions to the institution heads to run/open the labs properly during and after school hours

— Training programs need to be launched for Lab Coordinators, Teachers and Students separately

— Basic hardware training to be launched for Coordinators, Teachers and Students separately

— Freelancing platforms to be created locally

— ICT competitions to be launched in every lab, every district and divisional level

— A website is a must for each schools/colleges with Sheikh Russell Digital Lab

— Desktop will be more preferable to laptops in each lab

— A guard to be engaged for each lab to keep equipments secure
